Plants page 15

***Pristella Riddlei**

A very popular Tetra. The attractive coloration of its fins, active and peaceful habits make it an ideal fish for the community tank.

Pair.....\$1.00 3 for.....\$1.35

(Tetra from Rio)

*Hyphessobrycon flamens.

Pair.....\$1.00 3 for.....\$1.35

***Barbus Oligolepis**

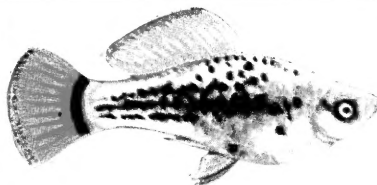

Pair.....\$2.00

Bloodfins

*Aphyocharax rubripinnis.

Pair.....\$1.50

**Niphophorus Variatus
Live Bearer**

*Full color with red tails.....\$2.00

*Full color with yellow tails.....1.00

*Red Variatus (Sunset).....1.50

***Blue Veiltail Guppy**

A new Guppy with large blue tails. The tails may be as large as the fish. Pair.....\$5.00

***Red Veiltail Guppy**

The Fish Fancier's Dream
In beautiful color combinations with large flowing tails. Very select pairs.

Pair.....\$2.50 to \$10.00

Neon Tetra

Hyphessobrycon Innesi

Pair.....\$1.00 Doz.....\$5.00

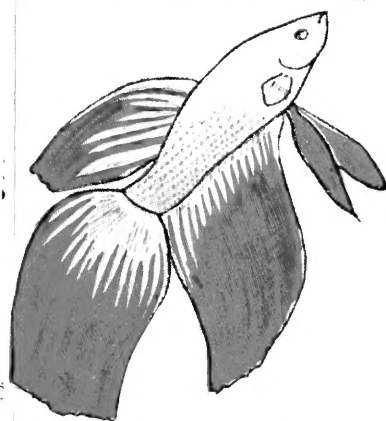

***Domino Helleri**

A hybrid Swordtail with 4 to 5 beautiful color variations, producing a short Swordtail.

Large breeders, pair.....\$2.00

Young, 1", each......50

4 for.....1.75

Betta Cambodia

Large Veiltail Breeders

Pair.....\$2.50 Young, each.....\$0.50

*Macropodus Cupanus, pair \$1.00

ROBERTSON, MISSOURI

LET US GET BETTER ACQUAINTED

Thanks to You

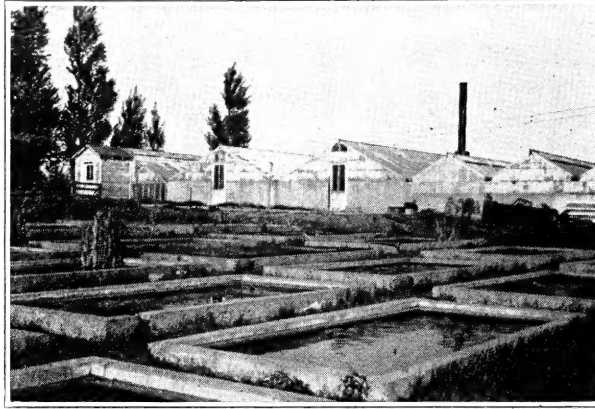

In Florissant Valley twenty miles from downtown St. Louis, is located a greenhouse much different than the average greenhouse. Instead of flowers it houses many varieties of tropical fishes and aquatic plants, also water lilies, snails and many other things you see listed in this catalogue.

A factory for the manufacture of fish aquariums and many other requirements for successful aquarium keeping is also in operation. A separate unit for the manufacture of fish foods is part of this unique hobby which has grown into a business covering several acres of buildings. This is the largest establishment of its kind in the world. More tropical fishes are produced here under glass in buildings than anywhere in this whole wide world.

It all started some fifty years ago when a small boy saw some tadpoles wiggling around a pond in a neighborhood pasture.

When you wrote us for this catalogue you indicated your interest in aquarium keeping. It is a fascinating hobby which may hold your interest for the rest of your life, or you may throw your aquarium into the ashpit in a short time. It all depends on whether you get the wrong or right start; not at all on how much money you may spend, but on how wisely you spend it.

For instance, if you buy the cheapest aquarium you are wasting your money. It will ruin your good table top and become a nuisance instead of a relaxation and pleasure.

We are interested all the way through to see that you get the right start and everything of the best money can buy, in order that you may enjoy your hobby and derive a lot of pleasure from aquarium keeping. An aquarium creates interest and is of much educational value to the entire family, and at times to the neighborhood. Many friends have been made in the aquarium hobby and you may be one of those who will cherish this friendship to your dying day.

Never consider an aquarium a plaything when you set up an aquarium. Your educational background should contain, besides arithmetic, such studies as chemistry, ichthyology, biology, botany and a lot of horse sense. You had better read up on some of the principles of

aquarium keeping instead of learning the hard way, which is more costly and discouraging. A good clear knowledge of the underlying principles of maintaining an aquarium and fish will enable you to enjoy the hobby to its fullest extent, and in the forthcoming pages we shall acquaint you with as much information as possible.

Thanks for the inquiry.

Sincerely yours,

O. C. BELDT, President.

PRINCIPAL AQUARIUM REQUIREMENTS

An eastern or southern exposure is best. An hour of direct sunlight each day is beneficial but not absolutely necessary. Plant life can be maintained with aquarium reflectors. After you have decided where you are going to place your aquarium (No. 1 Don't), do not place it in a dark corner. Then you are ready to start from the bottom up.

Put only clean aquarium sand on the bottom, sand that is not too coarse nor too fine. Clean it thoroughly or get a bag of Beldt's Washed Aquarium Grit. Put about 1½ to 2 inches of this sand on the bottom. (No. 2 Don't) Do not use coarse gravel or a lot of small shells on the bottom; food and refuse will lodge among this, decay and cause plant roots to rot, water to foul, poisonous gases to develop which results in suffocation of fish life.

OVERCROWDING

Overcrowding the aquarium is a rather tough proposition to thoroughly understand. You can even put too many plants of a certain kind in an aquarium. Most of the bunch plants, such as Myriophyllum, Cabomba, Ludwigia, etc., which are tied in bunches should be taken apart and planted in single strands. Most all of these bunch plants will root if you will separate them and plant the cut ends in the sand. But if you leave them tied in bunches they will usually rot. Too many of these plants may produce carbon dioxide and consume oxygen to survive instead of producing oxygen. Certain varieties of plants cannot overcrowd the aquarium; for instance, Vallisneria can grow so thick that you may count 100 plants to the square foot and you could hardly plant it thick enough to cause any damage.

PLANTS PRODUCE AND ALSO CONSUME OXYGEN

When an aquarium receives sufficient light, the plants produce oxygen. At night plants consume oxygen. Plant life absorbs carbon dioxide and the refuse and droppings of fishlife. Plants which have grown and multiplied in an aquarium for a long period usually are beneficial and do not cause trouble. Only newly purchased plants, when freshly replanted and if too crowded, may be detrimental, so your No. 3 Don't should be, do not overcrowd plants; while the No. 4 Don't should be, do not overcrowd fish.

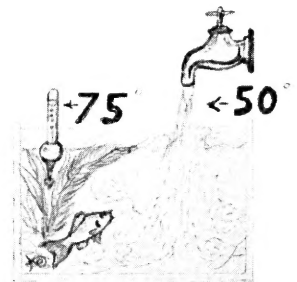

The only important factor of crowding fish life in the aquarium is water surface. Of course, artificial aeration will solve the problem of supplying oxygen to the fish. The greater the water surface of an aquarium the more fish it maintains in a healthy condition. If you ask, "How many fish can I put in an aquarium?" you will need a dozen answers. The size of the fish is the most important factor. Guppies and Moons, about four to the gallon. Fish from 1½ to 2 inches long, about two to the gallon.

OVERFEEDING

Overfeeding must be avoided at all times. Never more than one person should feed the fish. They seem to be hungry all the time. Surplus food should be siphoned off. Learn to feed only enough food so that the fish will consume all of it in 10 minutes. If the water becomes foul and

smells, it is a sure sign of decaying fish food. We also offer all of the principal live foods. Kindly check index under the heading of Live Foods.

TEMPERATURE CHANGES

An even temperature is very important. Great temperature changes may prove fatal; 75 degrees F. is a good temperature for the tropical aquarium. It suits all varieties; some may like it a little cooler. Never put cold fresh tap water in an aquarium to make up for evaporation. Use hot water, let it stand and cool off.

Clorout

When starting a new aquarium, you usually have only drinking water available for this purpose. Drinking water usually contains a lot of chlorine, which is a deadly poisonous gas to fish life. It will linger in water even after it has stood for some time. The only safe way to start an aquarium is to use Clorout. When you put one tablet to a gallon of fresh water, it at once changes the chlorine gas into a friendly salt. We list this inexpensive chemical compound on page 10.

Just the same, let the tank set at least one day before you plant it and another day before you put fish in it. So your Fifth Don't should be, "Do not rush fish or plants into a newly setup aquarium."

QUALITY • DEPENDABILITY • KNOW-HOW

We have been operating this tropical fish hatchery for thirty-seven years and we operate the largest hatchery north of Florida. We also operate the largest supply depot in the mid-west. All of the merchandise listed in this catalog is constantly on hand; it is very seldom that we are out of anything. The manufacturers whom we represent have a reputation for quality and all of this merchandise, including such things as pumps, filters, heaters, aquariums, stands, and reflectors are all guaranteed for your satisfaction. Should there be anything wrong with a shipment when you receive it, do not return this shipment until after you hear from us, but write us within three days upon receipt of the shipment and we will see to it that you get a satisfactory adjustment. Our policy, you must be satisfied.

Price \$1.00

"Your Aquarium"

by WILLIAM T. INNES

A 32-page booklet, well illustrated, for the beginner. It explains so that everyone can easily understand all of the fundamentals of aquarium success.

Price \$0.25

Pet Fish NEED it!
A SCIENTIFIC WATER FILTER
EUREKA AQUARIUM PURIFIER
PATENT PENDING

- Eliminates need for cleaning—for years!
- Installed without removing fish or gravel!
- Eliminates harmful decay from gravel!
- Eliminates poisonous gases and odors!
- Eliminates unsightly filter boxes!
- Filters and purifies—continuously!
- Converts waste material into plant food!
- Keeps water clean and clear—for years—
- Ideal for marine fish, too!
- Shapes to fit any shape or size tank!

Filtration Does NOT CLEAN Gravel!

Filtration of water at its best does not clean gravel in which excess food and dead plant material collect and decay causing gases which are poisonous to animal and plant life.

But now—the EUREKA AQUARIUM PURIFIER circulates filtered water through the gravel bed—removes poisonous gases—converts extraneous matter into plant food—keeps water pure and clear—for years!

Designed and constructed by a Hobbyist with years of experience—on the same principles of water purification as used for human consumption!

Your aquarium can remain intact from the day it is first set up!

3 Adjustable & Convertible Sizes

	NO. 5 (8" x 14") up to 5 Gal. size tanks. Retail \$3.49
	NO. 10 (12" x 20") 10 to 15 Gal. size tanks. Retail \$3.99

Round Leaf Spatterdock

The round leaves, up to 3 inches across, are somewhat translucent. An ideal low growing show plant.

Nice specimens, each\$0.50 Extra large\$1.00

Beldt's Aquarium, Inc.
Robertson, Mo.

I received the special collection which I ordered and which is the reason for this letter. The plants are ideal and extra plants must have been put in this group as there were many more than I even expected. All were of good color, and a large Mystery snail was included. All I can write is that I like to deal with people like you, and I will spread the word about. An honest business will certainly enlarge itself.

Thank you again.
Orville M. Steward,
Bayshore, L. I., N. Y.

A fine delicate aquatic ideal for decorative and propagating purposes. Ideal for young to hide in. Per bunch.....\$0.50

Water Hyacinths

A widely used plant for propagating tropical egg layers which spawn on hyacinth roots.

Each.....\$0.30
6 for.....1.50

It is unlawful to ship hyacinths to Southern States where they have become a pest.

DIRECTIONS TO CUSTOMERS

When Writing in Regard to Your Orders
BE SURE TO MENTION ORDER NUMBER

FORWARDING

All prices f.o.b. St. Louis subject to exceptions as listed in this catalog.

RETAIL STORE

Our retail store on Howdershell Road is open daily from 8 a.m. to 4 p.m., Fridays to 9 p.m., Saturdays to 5 p.m. Closed Sundays and Holidays. Visit our store and see the many aquatic displays of plants and fish. We grow our own plants indoors and all of the tropical fish are grown indoors in buildings also, which results in extremely strong and healthy fish and plants, which live indoors under artificial light conditions with extremely good results. You will be amazed how well these fish and plants thrive in your aquariums compared to outdoor grown fish and plants which are shipped in from Florida. There is absolutely no comparison. Try ours and be convinced.

HOW TO SHIP MERCHANDISE

Plants and all supplies which are not too large can be shipped by mail. Aquariums and stands and other merchandise too large to go by mail are shipped by express, freight, or air freight.

EASY TO FIGURE PACKING AND PARCEL POST RATES

We make a flat postage and boxing charge on all orders for plants, heaters, pumps, filters, etc. Parcels in the 1st and 2nd zone add \$1.00, 3rd zone add \$1.25, 4th zone add \$1.50, 5th zone add \$2.00, 6th zone add \$2.25 and in the 7th zone add \$2.50. This covers postage, packing, and insurance charges.

TROPICAL FISH BY MAIL

We are now mailing tropical fish by parcel post and air parcels in polyethylene bags in which an additional supply of oxygen is provided. Tropical fish can be mailed from April 1st until November 15th. Charges are as follows, and they include shipping cartons, plastic bags, postage, air freight on long distance shipments, and special handling and insurance.

REGULAR PARCEL POST RATES FOR 20 LBS.

Zones 1 and 2—\$2.65.

AIR PARCEL POST RATES FOR 20 LBS.

Zone 3—\$9.00, Zone 4—\$9.65, Zone 5—\$10.78, Zone 6—\$12.91, Zone 7—\$14.43.

Small orders, of course, will weigh less than 20 pounds, all depending on the amount of fish and size which have to be packed in one bag.

AIR FREIGHT

Air freight shipments of fish and other supplies can be made to many parts of the country, especially to larger cities. Air freight rates are lower than air parcels.

RAILWAY EXPRESS SHIPMENTS

Many shipments are made by Railway Express, and if you order your shipment made by express do not include express charges, because they are collected when the fish are delivered to you. Simply state on your order blank "Ship via Railway Express."

SHIPPING CANS

When the fish are shipped by express they must be packed in cans. These cans are then packed in insulated cartons. These complete shipping containers cost \$1.75. Add this to your order when ordering tropical fish shipped by express.

TAXES

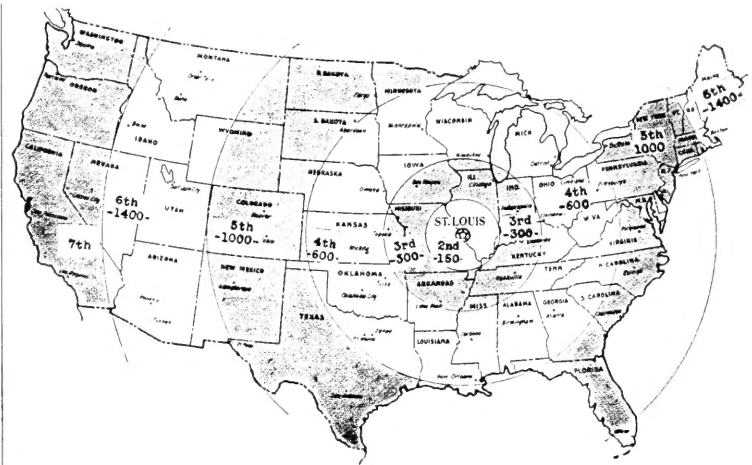

Missouri residents add 2% retail sales tax to all orders.

CASH WITH ORDER

Please send sufficient money with order to cover the whole bill. We do not ship Collect On Delivery unless 50% remittance is made with the order to guarantee acceptance.

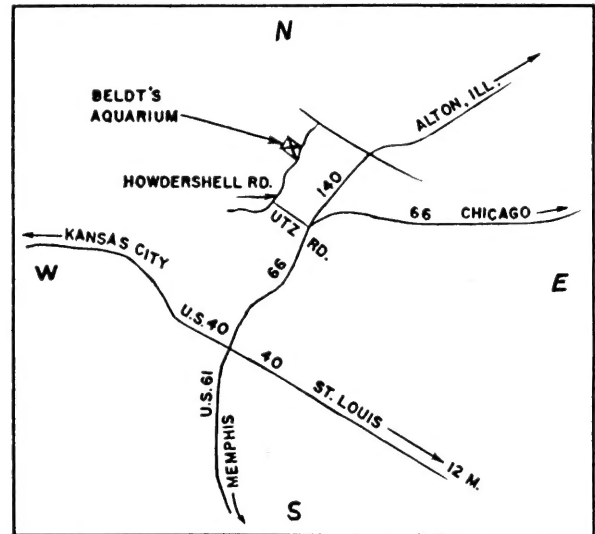

MERCHANDISE

We have been operating this tropical fish hatchery on Howdershell Road for thirty-five years. The quality of our northern grown fish and plants is unsurpassed. The quality of all our merchandise is guaranteed by the manufacturers whom we represent. Your satisfaction is our main concern. Let's get acquainted.

OUR LOCATION

This map illustrates our location in regard to your postal zone so it will be easier for you to figure transportation charges. The map below shows our location near Hwy. 66, ten miles west of St. Louis. We are not open on Sundays or Holidays.
